PREFACE
NAQSRO
April 2000

The organizations listed are those that have informed NIST about their quality system registration according to the ASQ Q9000 series, the ISO 9000* series, QS-9000, ISO 14000 (EMS) or equivalent criteria for the U.S., Canada and Mexico. NO ATTEMPT HAS BEEN MADE TO EVALUATE ANY OF THESE PROGRAMS. Interested parties are advised to review and compare the offered services (particularly the registrar's scope of accreditation as indicated) when selecting a program appropriate to their needs. A Table of Contents has been included along with a Glossary and Appendix. All information was confirmed based upon that returned for this current update. For inquiries, please contact the following person:

Michael Squires

* **NOTE:** The ISO 9000 (1994) series are undergoing changes expected to be published in 2000. It is important to be mindful of the following when considering the quality standard transitions in one's overall planning/timeframe, particularly for auditing and certifying activities this year:

- The Draft International Standard (DIS) for ISO 9001:2000 is available at the time of this printing. It is being widely circulated through ISO member bodies for comment and ballot. A five-month balloting period will end on April 25, 2000 for the DIS. More information may be found on the U.S. ISO member (ANSI) website at www.ansi.org.
- If 75 percent of ISO members vote favorably for the DIS, the standard will be approved for further processing in the Final Draft International Standard (FDIS) stage. The standard will be circulated then to ISO members for ballot only. The FDIS has a target for release date in the third quarter of 2000.
- At the point the FDIS has been accepted by 75 percent of members, a final text version will be prepared. The final publication by ISO is expected during the fourth quarter of 2000. Additional details are on the ISO website at www.iso.ch.
